Pivot to the Future: Managing Two Curves at Once

AMH is moving between two business curves. The first is the publisher model that built today's trust and revenue. The second is the digital product platform that carries AMH's next decade.

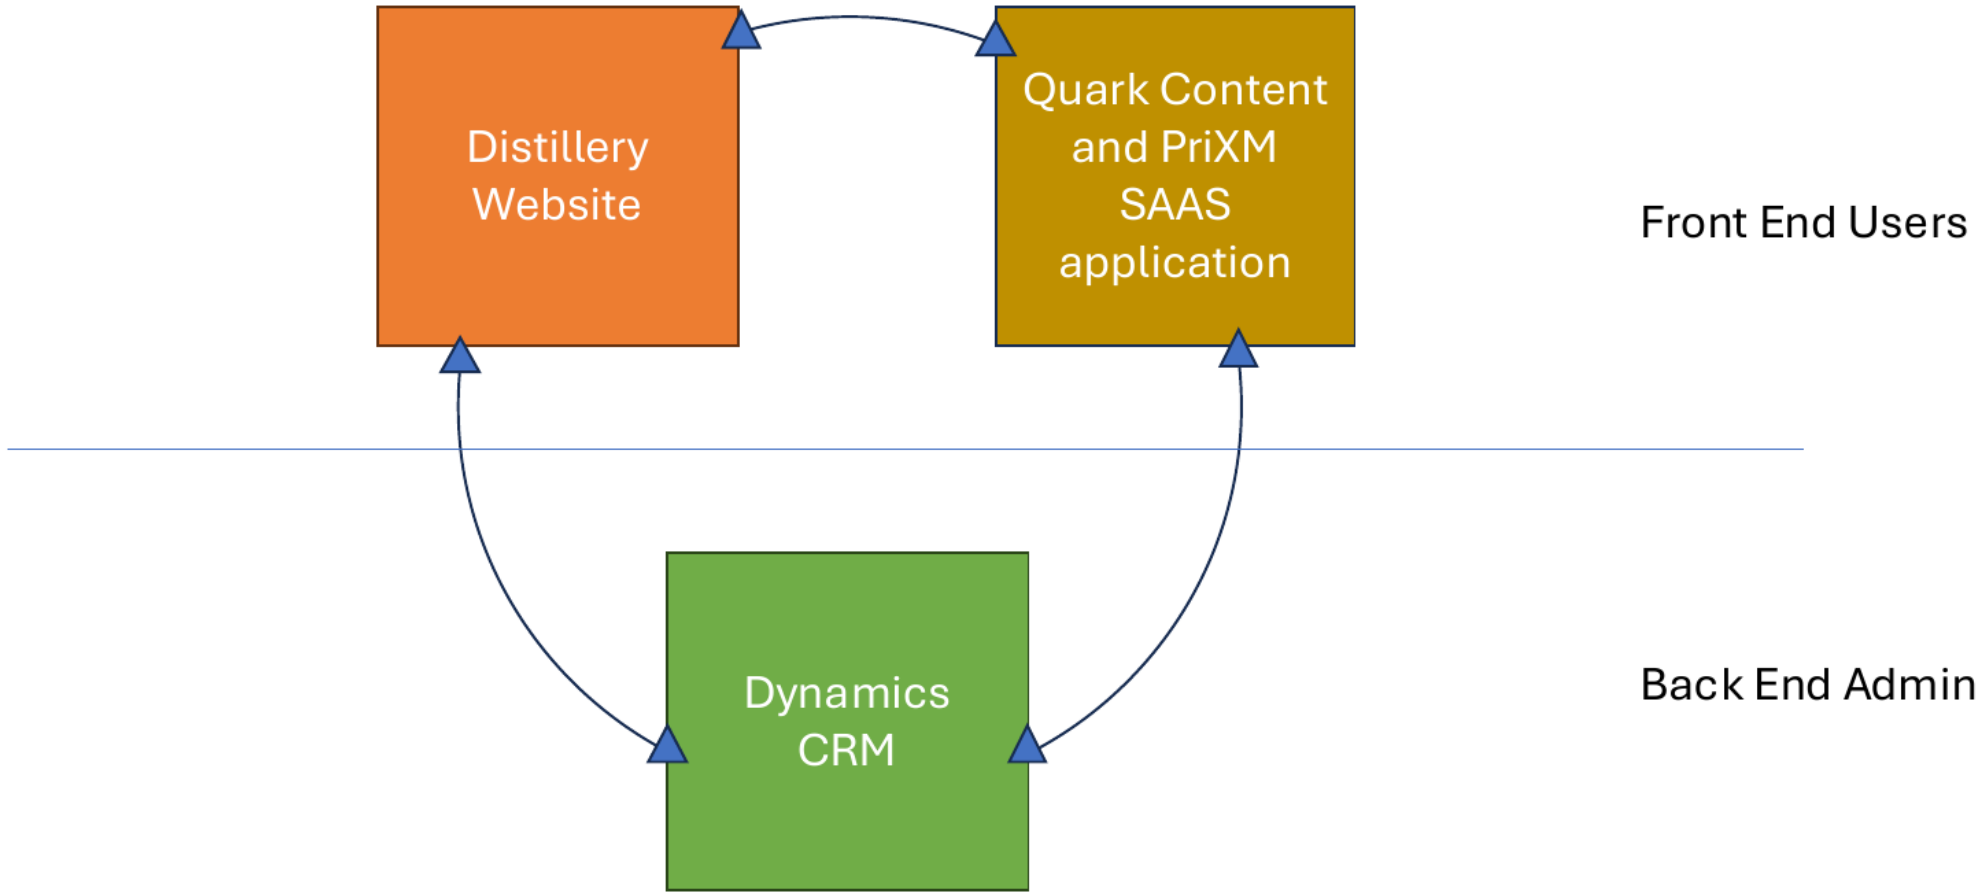

AMH is at the inflection point of the first curve. An inflection point cannot be seen from inside it. It is only visible looking back. This review gives the Board that view now.

The wise pivot is not a leap from old to new. It focuses on the critical April 2027 publishing window and access for current users, while building tomorrow (Day 2) the intelligent platform, product ownership and a simpler commercial model.

The recommendations are focused on small hinges that swing a big door. Restructuring the committees, three new roles, agreed set of parameters and Board approved roadmap.

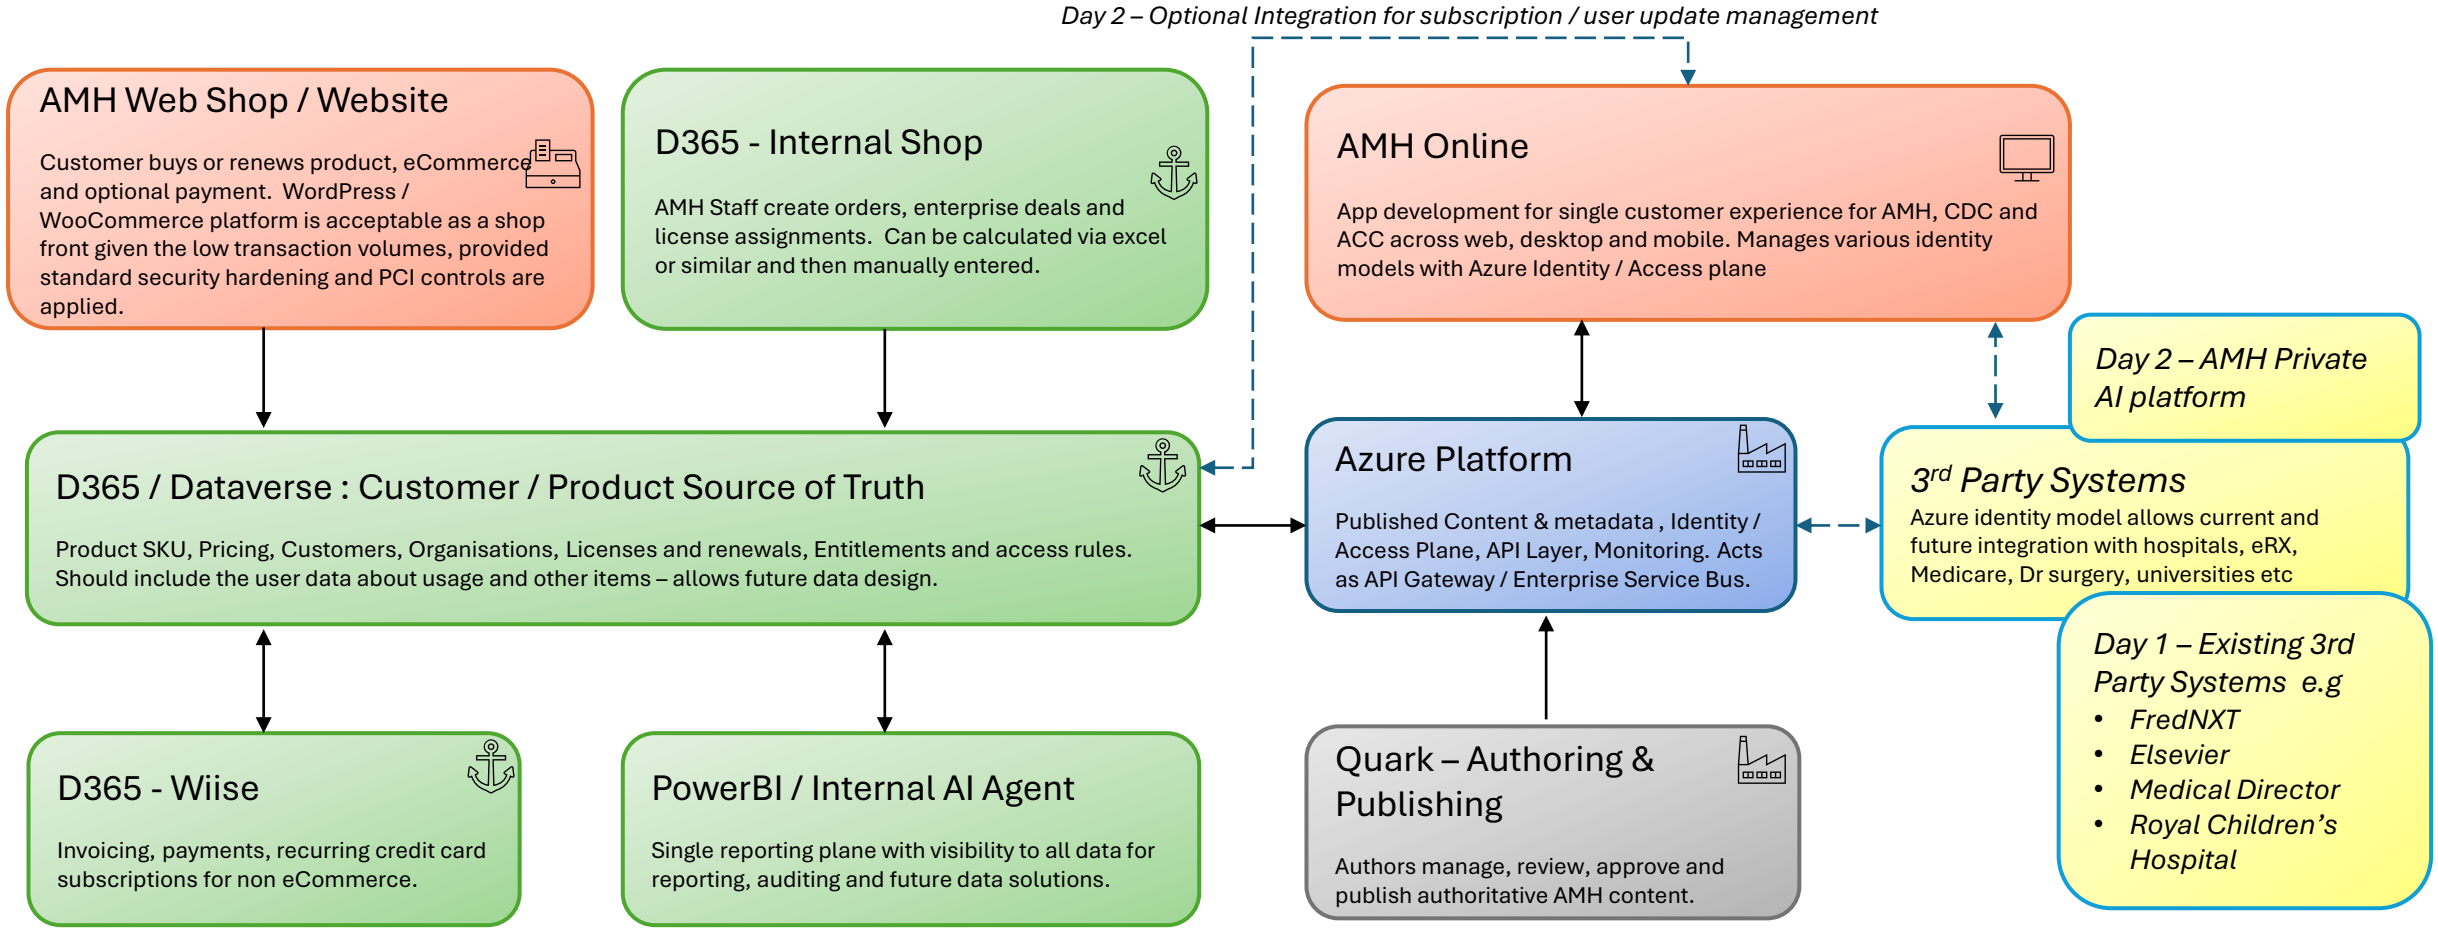

What the original tender requirements described from a tech stack.

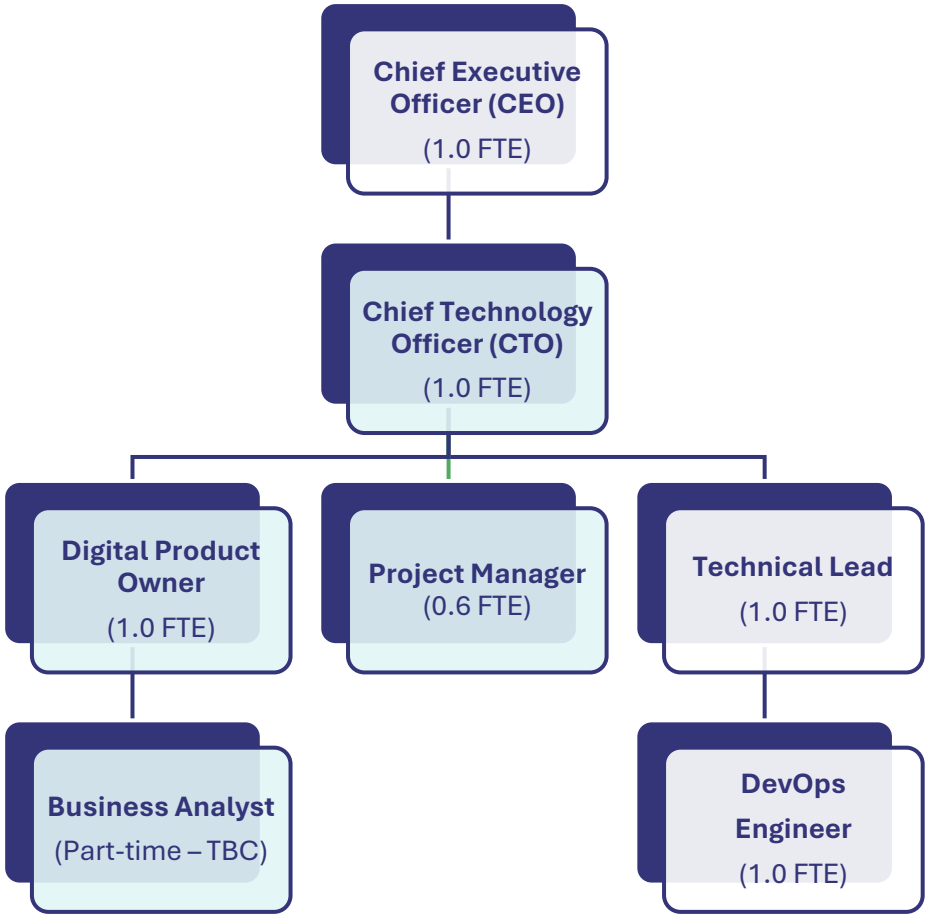

Current High-Level Architecture

Architecture Statement

The web shop sells products, while D365 manages license and access. The azure platform identifies users and checks eligibility through Azure platform which provides flexibility for day one model, and future licensing model changes with centralised reporting available through D365 / Dataverse that can be extended into future AI / BI capabilities both on front end and back-end systems

Proposed Structure

Outcomes

- **Appoint new Chief Technology Officer (CTO)**
  - Strategy, Architecture, Engineering, Security, Dev Ops, Platform Operations, Digital Transformation
- **Consider**
  - Project Management
  - Business Analytics
  - Product and Platform operations and ownership

Thank you.
